DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsuura (5,615,318) .

Regarding Claims 1, 7 and 13, Matsuura teaches a coordinate input apparatus which detects three-dimensional position coordinates of an indicating tool, comprising: detection means (input means as 1100 in fig.1) for detecting a three-dimensional coordinate value of the indicating tool which is defined in first, second, and third dimensions (figs.1-3; summary; col.6, line 6- col.7, line 66; col.11, line 34- col.15, line 32); comparing means (calculation means as 1200 in fig.1) for comparing a coordinate value in the first dimension of the three-dimensional coordinate value with a predetermined value (figs.1-3; summary; col.6, line 6- col.7, line 66; col.11, line 34- col.14, line 40); and control means (image processing means as 1300 in fig.1) for controlling outputting of coordinate values in the second and third dimensions on the basis of the comparison result obtained by said comparing means (summary; figs.1-3; col.6, line 6- col.7, line 66; col.11, line 34- col.15, line 32).

Regarding Claims 2 and 8, Matsuura teaches a control means outputs the coordinate values in the second and third dimensions on the basis of the comparison result obtained by said comparing means (figs.1-3; col.6, line 6- col.7, line 66).

Regarding Claims 3 and 9, Matsuura teaches wherein if the coordinate value in the first dimension is not more than a predetermined value, said control means outputs the coordinate values in the second and third dimensions (figs.1-3; col.6, line 6- col.7, line 66; col.11, line 34- col.15, line 32).

Regarding Claims 4 and 10, Matsuura teaches the control means comprises storage means for storing a first three-dimensional coordinate value detected at a first time point in an any period on the basis of the comparison result obtained by said comparing means, and controls outputting of a difference between a second three-dimensional coordinate value detected after the first time point and the first three-dimensional coordinate value (summary; figs.1-3; col.6, line 6- col.7, line 66; col.11, line 34- col.15, line 32).

Regarding Claims 5 and 11, Matsuura teaches the control means comprises storage means for storing a first three-dimensional coordinate value detected at a first time point in an any period when the coordinate value in the first dimension is not less than a predetermined value, and controls outputting of a difference between a second three-dimensional coordinate value detected after the first time point and the first three-dimensional coordinate value (figs.1-3; summary; col.6, line 6- col.7, line 66; col.11, line 34- col.15, line 32).

Regarding Claims 6 and 12, Matsuura teaches the control means further outputs the comparison result obtained by said comparing means (figs.1-3; col.6, line 6- col.7, line 66).

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Matsushima teaches the coordinate detecting apparatus.
